Introduction to C programming language

Exercise 1:

Write a program that take 3 integers as an input and output their sum.

Exercise 2:

Write a program that take a float an input and output its square.

Exercise 3:

Write a program that take 2 integers as an input and output their quotient. Show only 2 digits after the comma.

Exercise 4: (bonus)

Write a program that perform the Euclidean division of two integers a and b (assume that a > b).
